used to describe the operation, analysis, and design of control systems are presented. Control means to regulate, direct, command, or govern. A system is a collection, set, or arrangement of elements (subsystems). A control system is an interconnection of components forming a system configuration that will provide a desired system response.

5. Flexural Analysis and Design of Beams 5.1. Reading Assignment Chapter 3 of text 5.2. Introduction It is of interest in structural practice to calculate those stresses and deformations which occur in a structure in service under design load. For reinforced concrete beams this can be done by the methods just presented, which assume elastic behavior of both materials.

System analysis and design focus on systems, processes and technology. 1.2 Over View of System Analysis and Design Systems development can generally be thought of as having two major components: Systems analysis and Systems design. System design is the process of planning a new business system or one to replace or complement an existing system.
