We have implemented a Factor Analysis option for Binary Data into VISta "The visual statistics system" : <http://www.uv.es/visualstats/Book/>

How to test factor analysis binary data in SPSS?

Founded by teacher Philip Holmes-Smith, SREAMS has been changing the way schools record and evaluate their data for over 10 years. In 2007 SREAMS released The Student Performance Analyser (now called SPAsstandard), a revolutionary piece of software that took school data evaluation into the 21st century.

SREAMS/SPAsplatform

Some data analysis techniques are not robust to missingness, and require to "fill in", or impute the missing data. Rubin (1987) argued that repeating imputation even a few times (5 or less) enormously improves the quality of estimation. For many practical purposes, 2 or 3 imputations capture most of the relative efficiency that could be captured with a larger number of imputations.

MEDYAD Coming in April 2019 MEDYAD is an easy-to-use regression-based computational tool for SPSS and SAS that conducts mediation analysis with distinguishable dyadic data.

SPSS, SAS, and Mplus Macros and Code - Andrew F. Hayes, Ph.D.

Introduction. This webpage contains links to Mplus code for testing different configurations of mediation, moderation and moderated-mediation models.

Mplus code for mediation, moderation, and moderated

Latent growth modeling is a statistical technique used in the structural equation modeling (SEM) framework to estimate growth trajectories. It is a longitudinal analysis technique to estimate growth over a period of time. It is widely used in the field of behavioral science, education and social science.

Latent growth modeling - Wikipedia

Inter-rater reliability κ . Krippendorff's α (also called Krippendorff's Coefficient) is an alternative to Cohen's κ for determining inter-rater reliability.. Krippendorff's α : Ignores missing data entirely. Can handle various sample sizes, categories, and numbers of raters.

Krippendorff's Alpha Reliability Estimate: Simple

Question: Where are the model templates for PROCESS v3? Answer: The templates for numbered models in PROCESS v3 are available in Appendix A of the 2nd edition of Introduction to Mediation, Moderation, and Conditional Process Analysis. They are not available in electronic form except in the electronic edition of the book.

Why SAS Is the Analytics Leader. Through our innovative, trusted technology and passionate connection to the progress of humanity, SAS empowers and inspires our customers to move the world forward by transforming data into intelligence.

Analytics, Business Intelligence and Data Management | SAS

Cramer's V is a measure of association for nominal variables. Effectively it is the Pearson chi-square statistic rescaled to have values between 0 and 1, as follows: $V = \sqrt{X^2 / [nobs * (min(ncols, nrows) - 1)]}$
