Transhumanism is not necessarily a bad thing, it is just a tool. It can be used for good or evil, like any tool. Unfortunately, most all transhumanists are materialists, so human beings, as well as animals, are not deserving of compassion, love, etc.

A genetically modified organism (GMO) is any organism whose genetic material has been altered using genetic engineering techniques.The exact definition of a genetically modified organism and what constitutes genetic engineering varies, with the most common being an organism altered in a way that "does not occur naturally by mating and/or natural recombination".

In biology, a gene is a sequence of nucleotides in DNA or RNA that codes for a molecule that has a function. During gene expression, the DNA is first copied into RNA.The RNA can be directly functional or be the intermediate template for a protein that performs a function. The transmission of genes to an organism's offspring is the basis of the inheritance of phenotypic trait.

Genetic programming (GP) is an automated method for creating a working computer program from a high-level problem statement of a problem. Genetic programming starts from a high-level statement of "what needs to be done" and automatically creates a computer program to solve the problem.

Our knowledge of genetic variations has been so profoundly influenced by Mendelian genetics that it is difficult to speculate about the ways in which our thinking will need to change with further insights into genomics. We have far to go in teasing apart the multiple variables of complex traits and diseases, the relationships between hereditary, somatic and environmental factors, and in making ...
