The first four axioms mean that V is an abelian group under addition.. Elements of a vector space may have various nature; for example, they can be sequences, functions, polynomials or matrices.Linear algebra is concerned with properties common to all vector spaces.

In mathematics, a unimodular matrix M is a square integer matrix having determinant $+1$ or -1 . Equivalently, it is an integer matrix that is invertible over the integers: there is an integer matrix N which is its inverse (these are equivalent under Cramer's rule).Thus every equation $Mx = b$, where M and b are both integer, and M is unimodular, has an integer solution.
