What is Positron Emission Tomography – Computed Tomography (PET/CT) Scanning? Positron emission tomography, also called PET imaging or a PET scan, is a type of nuclear medicine imaging. Nuclear medicine is a branch of medical imaging that uses small amounts of radioactive material to

PET Positron emission tomography (PET) is a to-mographic imaging technique which allows noninvasive quantitative assessment of bio-chemical and functional processes. A range of positron emitters are available for use but 18 F (combined with FDG – uorodeoxyglucose) is the most commonly used. PET-CT has par-ticular value in cancer diagnosis and ...
