Assessing decision-making capacity in older individuals with dementia, now known as major neurocognitive disorder (MND), is a complex and challenging endeavor. There is a dearth of literature that touches on the sensitive and controversial topic of sexuality in institutionalized settings, despite the rapid increase in the global population of older individuals.

Repressed memories are memories that have been unconsciously blocked due to the memory being associated with a high level of stress or trauma. The theory postulates that even though the individual cannot recall the memory, it may still be affecting them subconsciously, and that these memories can emerge later into the consciousness. Ideas on repressed memory hiding trauma from awareness were ...
