Surface-mount technology (SMT) is a method for producing electronic circuits in which the components are mounted or placed directly onto the surface of printed circuit boards (PCBs). An electronic device so made is called a surface-mount device (SMD). In industry, it has largely replaced the through-hole technology construction method of fitting components with wire leads into holes in the ...

3. Prioritizing Requirements. New requirements, including defects identified as part of your user testing activities, are prioritized by your project stakeholders and added to the stack in the appropriate place. Your project stakeholders have the right to define new requirements, change their minds about existing requirements, and even reprioritize requirements as they see fit.
